PROFESSIONAL SUMMARY

Healthcare IT professional and full stack developer with a decade of experience in highly regulated environments. Compliance background across multi-site healthcare organizations combined with hands on development skills in JavaScript, React, Node.js, and healthcare data standards including FHIR R4 and HIPAA. Completed Columbia Engineering's Full Stack Web Development program and hold certifications in Google IT Support and AWS Cloud fundamentals.

- Improved audit readiness by 60% and reduced reporting errors by 45% across 4 healthcare facilities through structured process improvements and compliance documentation standardization.
- Managed software access and user accounts for 40+ staff across a multi-site organization using SaaS platforms, EHR systems, and digital collaboration tools.
- Led compliance training and platform onboarding for staff across 4 healthcare facilities while simultaneously managing regulatory documentation, software access, and audit preparation under strict state and federal standards.

TECHNICAL SKILLS (years of experience)

Compliance:	HIPAA (10y), HITECH, NY State Regulatory Standards (10y), Audit Readiness (10y), Compliance Documentation (10y)
Access & Identity:	Role Based Access Control, User Account Management, Software Access Provisioning, Least Privilege Enforcement, Access Audit Logging
Development:	JavaScript (1y), TypeScript (1y), React (1y), Node.js (1y), Express.js (1y), SQL (1y), MongoDB (1y), PostgreSQL (1y), GraphQL (1y), REST APIs (1y), Git/GitHub (1y)
Healthcare & Data Standards:	FHIR R4, HAPI FHIR, EHR/EMR Platforms (10y), SHA-256 Hash Chaining, Tamper Evident Audit Trails, Clinical Data Structures
Testing & QA:	Cypress (1y), Manual Testing (1y), Automated Test Suites, 15 Passing Tests
Platforms & Tools:	Jira (1y), Zendesk (2y), ServiceNow, SaaS Applications (4y), Google Workspace (2y), Windows (1y), macOS (1y)
Networking:	TCP/IP, DNS, DHCP, VPN, Wi-Fi Troubleshooting (Google IT Networking Certificate)
Collaboration:	Microsoft Office Suite (8y), Zoom (5y), Slack (2y), VoIP

WORK EXPERIENCE

ABA Therapist | Golden Care Therapy | New York, NY

November 2023 – Present

- Applied structured data tracking and digital documentation in EHR systems under strict NY State and HIPAA compliance standards.
- Physically conducted behavioral trials, analyzing client responses in real time and correcting, redirecting, and adjusting each prompt on the spot based on ongoing behavioral tracking to drive skill acquisition and behavior modification.
- Coordinated with cross functional teams including clinical staff, supervisors, and families to implement and adjust intervention strategies while maintaining detailed documentation.
- Maintained rigorous HIPAA compliance and regulatory standards across all record keeping and communication workflows.

- Oversaw compliance and operations across 4 multi-site healthcare facilities, improving audit readiness by 60% through structured process improvements and documentation standardization.
- Reduced reporting errors by 45% across 40+ staff through systematic process improvement initiatives.
- Managed software access and user accounts across multiple platforms, serving as first point of contact for platform issues before escalating to vendors.
- Led compliance training sessions for staff on regulatory standards and platform usage across the organization.
- Transitioned compliance documentation to standardized digital formats, improving data accuracy and consistency organization wide.

CERTIFICATIONS

Columbia University Engineering

April 2025

Columbia University — Full-Stack Web Development (24-week Comprehensive Course)

AWS: Fundamentals of Cloud Computing.

June 2026

Whizlabs | Credential ID : 9K4HC2FL6O14

Google IT Support: Technical Support Fundamentals

April 2026

Google/Coursera — Credential ID: LS07IEGV9KX5

ISTQB CTFL — Software Testing Foundation

2025

International Software Testing Qualifications Board (Training Completed, Exam Pending)

TECHNICAL PROJECTS

HIPAA Audit Log (Tamper Evident Access Trail)

Live: <https://hipaa-audit-log.onrender.com>

Code: <https://github.com/SamanthaMakowski/hipaa-audit-log>

- Built a tamper evident audit log in JavaScript that records every access to a patient record, capturing who acted, which record, what action was taken, and whether it was permitted.
- Made the trail tamper evident by hash chaining entries with SHA-256 so any edit or deletion breaks the chain and is flagged by a verification endpoint.
- Enforced access rules server side through a Node and Express REST API with a searchable audit view filterable by user, action, outcome, and record.
- Wrote 15 automated tests covering chain formation, denied attempt logging, and detection of both edited and deleted entries.

FHIR Patient Data Explorer (Live Healthcare Web App)

Live: fhir-patient-explorer.onrender.com

Code: github.com/SamanthaMakowski/fhir-patient-explorer

- Built a full stack web app that retrieves patient demographics, conditions, medications, and allergies from a live FHIR R4 server, the data standard used by major EHR platforms including Epic.
- Developed a Node.js and Express backend that acts as a secure proxy between the browser and the FHIR server, keeping clinical data behind a controlled backend.
- Designed an EHR style interface with patient records and clinical status indicators driven by real FHIR data fields.

Role Based Patient Records (Healthcare RBAC Demo)

Live: <https://rbac-patient-records.onrender.com>

Code: <https://github.com/SamanthaMakowski/rbac-patient-records>

- Built a role based access control system where the same patient record returns different fields based on the user's role: doctor, nurse, receptionist, and admin.
- Enforced every access rule server side so restricted data never reaches the browser, implementing the HIPAA minimum necessary standard with an allowlist that fails closed for unrecognized roles.
- Built an access audit log exposed through an API endpoint that records who viewed each record and what was withheld.

Portfolio Site

Live: samanthamakowski.dev

Code: <https://github.com/SamanthaMakowski/samantha-portfolio>

- Built a full stack portfolio using React and Vite with a Node.js and Express backend. Frontend features include a binary background animation, sticky stacking project cards with 3D flip panels, a functional command line terminal, and a scrolling GitHub feed ticker.
- Implemented an AI assistant backed by a real API endpoint that calls Claude through the Anthropic API with rate limiting per IP, a daily request cap, and CORS protection so the key never reaches the client.
- Built a second backend server that tracks resume downloads. Analytics server logs visits, referrer, device type, and time on page in real time via heartbeat. Contact form delivers directly to email via EmailJS with real time validation.
